Cover your drain to prevent loss of parts. Be sure to wear eye protection while cutting pipe

MAINTENANCE

0

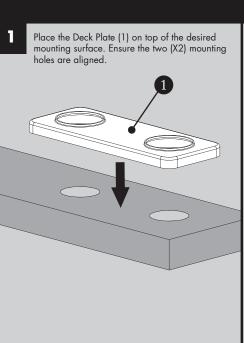

Your new Speakman Product is designed for years of trouble-free performance. Keep it looking new by cleaning it periodically with a soft cloth. The use of harsh chemicals and abrasives may damage the finish and void the product warranty. Please be sure to only use approved cleaners. Please contact Speakman for any clarification of acceptable cleaners.

WARRANTY

0

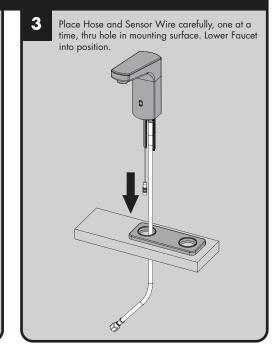

Warranty information can be found at: www.speakman.com

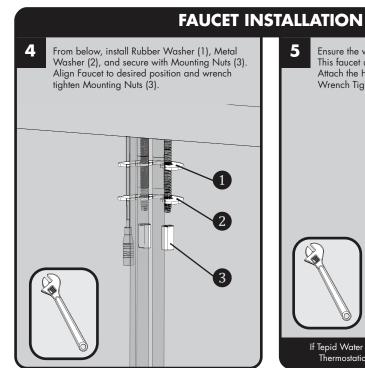

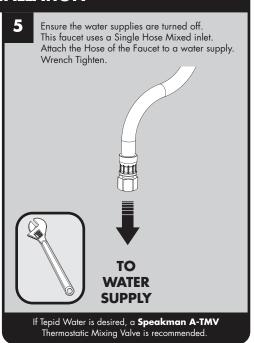

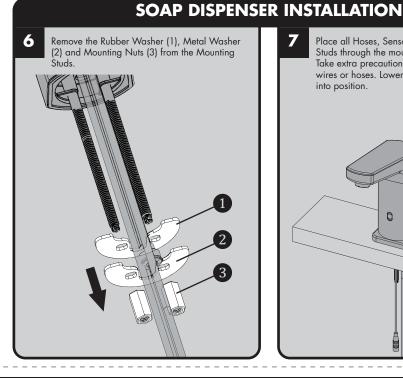

Remove Mounting Hardware (1) from faucet. Verify that the Rubber Gasket (2) is in position and aligned to the base of the faucet. NOTE: If an AC Adaptor is being used, locate the AC Connector Cable (Green) (3) inside the faucet body and pull the connector out.

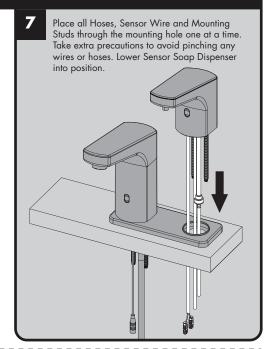

FAUCET INSTALLATION

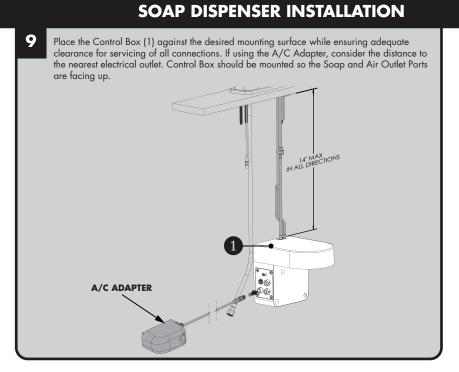

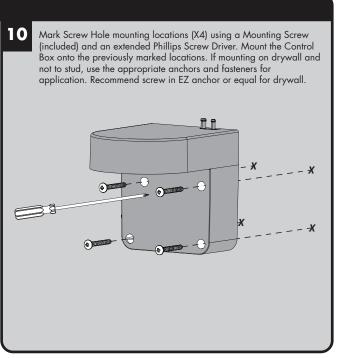

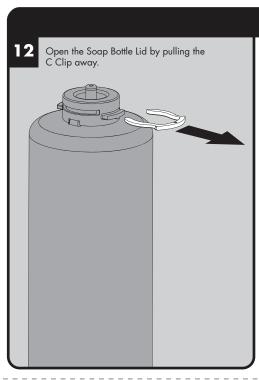

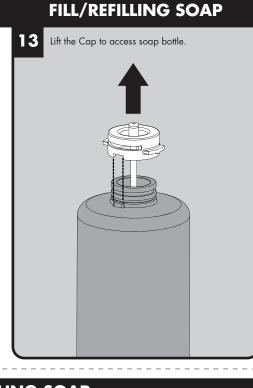

8 From beneath, reinstall the Rubber Washer (1), Metal Washer (2) and Mounting Nuts (3) to secure the Sensor Soap Dispenser. Align the Sensor Soap Dispenser to desired position and wrench tighten Mounting Nuts (3). Verify that the wires and hoses are not pinched.

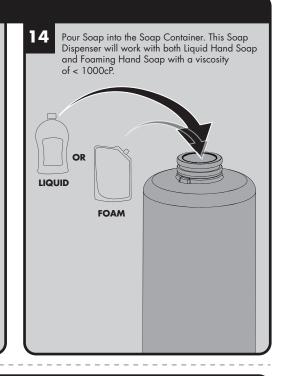

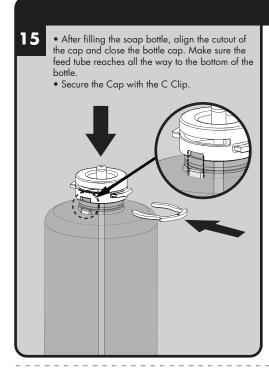

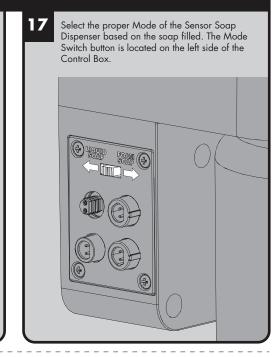

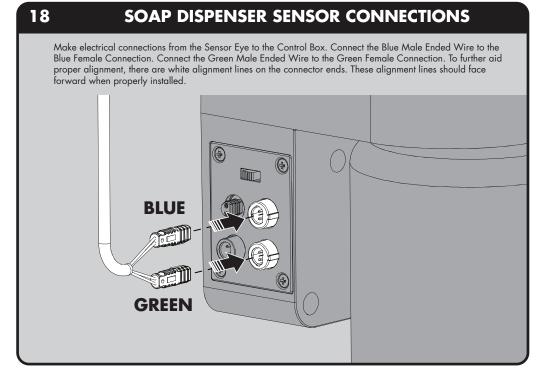

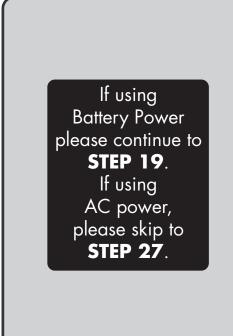

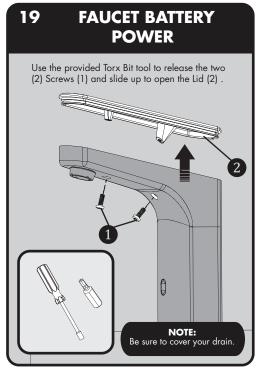

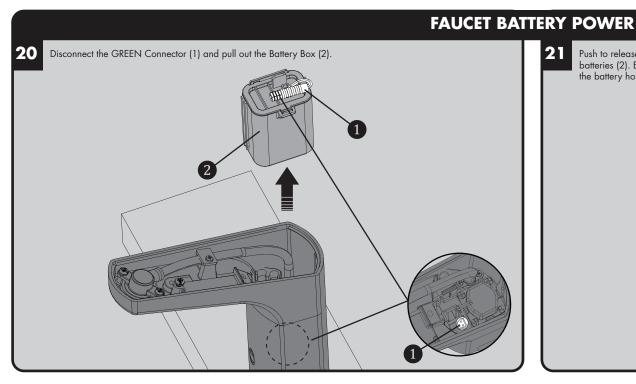

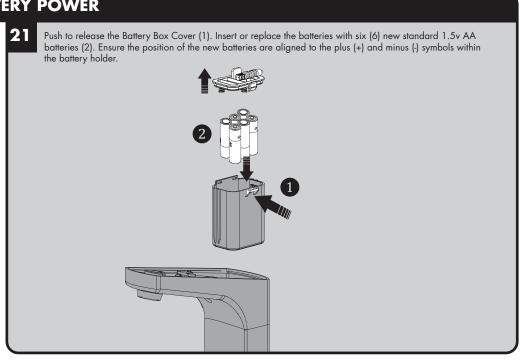

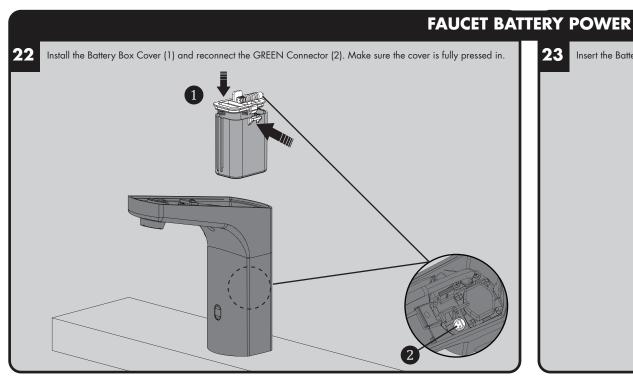

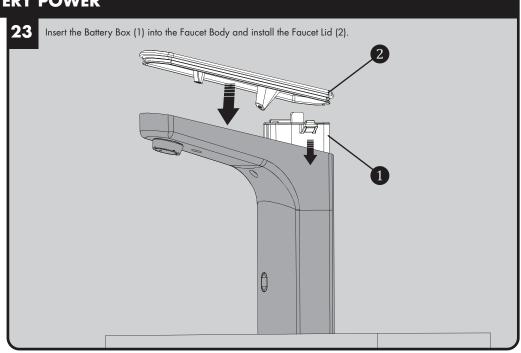

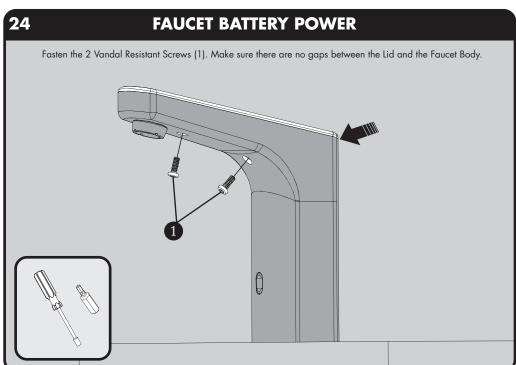

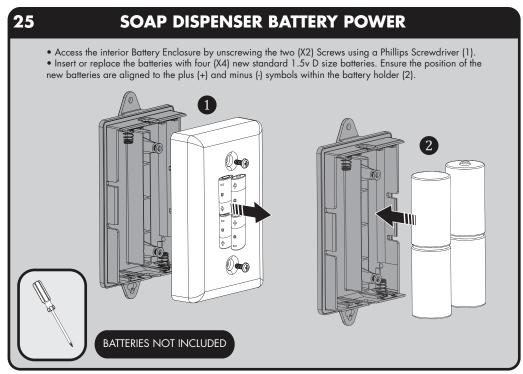

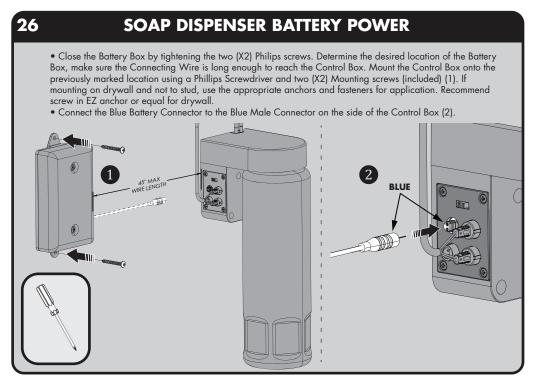

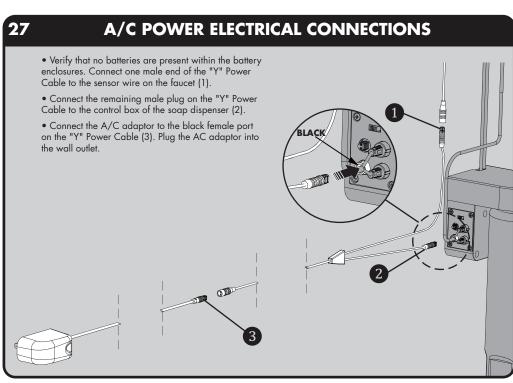

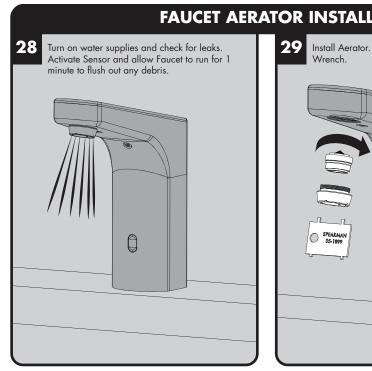

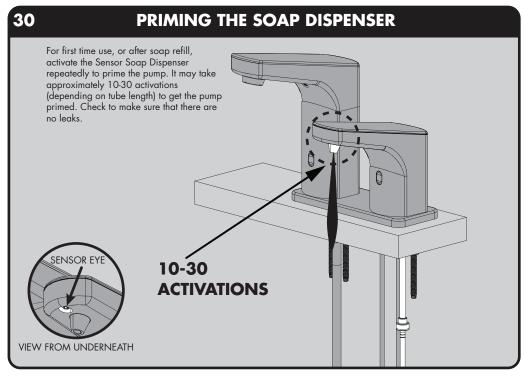

SFC-8790 CARE AND CLEANING

- 1) Your SENSORFLO® Faucet is designed and engineered in accordance with the highest quality and performance standards. With proper care, it will provide years of hygienic and trouble-free service.
- 2) Periodically, the Faucet will require some minor maintenance to keep it at peak performance. There is a low battery indicator located on the Sensor on the Faucet body. When the low battery light on the Sensor blinks, it indicates that the battery is low. To replace the batteries, follow the installation instructions in the electrical connections section of this document.
- 3) Periodically clean the In-Line Filter.
- 4) The polished chrome finish of your Faucet should be cleaned using mild soap and warm water.
- 5) Dry immediately with a soft, clean cloth for best results.
- 6) NEVER use abrasive cleaners, chemicals, alcohol or other solvents. They may damage the surfaces of the non-chrome plated finishes.

SFC-8790 TROUBLESHOOTING

SENSOR FAUCET:

If water flow from the Faucet decreases:

- 1) Make sure the supply stops are open.
- 2) Remove the Aerator from the spout using the outlet wrench. Operate the Faucet with outlet device removed. If water flow is acceptable, disassemble the outlet device and rinse components with clean water.

If no water flows from the Faucet, and

If you can hear a clicking sound of Solenoid opening, but no water flows:

- 1) Verify that the HOT and COLD wall stops are completely open.
- 2) If the Battery Light within the Sensor Eye blinks continuously, even when the Faucet is not in use, the batteries within the Solenoid have low voltage and need replacement.

If you **do not** hear a clicking sound of Solenoid opening and no water flows:

- 1) If the Battery Light within the Sensor Eye blinks continuously, even when the Faucet is not in use, the batteries within the Solenoid have low voltage and need replacement.
- 2) Unplug connections to Solenoid for 2 minutes. Plug connections back in. The red light on the Sensor should turn on for several seconds before becoming operational. If not, check power supplies and connections.
- 3) Disconnect the existing Solenoid Assembly and connect a new Solenoid Assembly. Activate the Sensor and check for water flow. If the water flows, the existing Solenoid Assembly should be replaced.
- If the batteries have been replaced, but the Faucet still does not operate:
- 1) Check the battery polarity and electrical connections. Make sure all electrical connections are fully inserted.
- 2) If the Faucet does not operate, replace the existing Solenoid Assembly with one you know to be functioning.

If the Faucet activates, but the water will not shut off:

- 1) Hold a hand in front of the Sensor at up to 7" away for more than 1 minute until the water flow stops. Once the water stops, remove your hand and wait 15 seconds. Then place your hand in front of the Sensor and verify that it is operating properly.
- 2) If the Faucet still does not shut off, cover the front of the sink with a towel. This will eliminate the potential of reflections activating the Sensor.
- 3) If it is a new installation and still not working, replace the Solenoid Assembly.

SENSOR SOAP DISPENSER:

If your sensor soap dispenser has reduced performance:

- 1) Check to see if the soap bottle needs refilling.
- 2) Check to see if the soap feed tube in the soap bottle is pulling from the bottom of the bottle.
- 3) Check to see if any tube is clogged or bent. If it is clogged, clean all tubes with water.
- 4) If the bottle is refilled and issue continues, check the viscosity of the soap. This soap dispenser is only compatible with soap that has less than 1000cP viscosity.
- 5) If high viscosity soap use is desired, mix the soap with warm water to reduce viscosity.

If your sensor soap dispenser has completely stopped working:

- 1) Check to see if the soap bottle needs refilling.
- 2) Check to see if the soap bottle is correctly installed.
- 3) If battery power is used, replace batteries with new ones and try to reactivate the sensor soap dispenser.
- 4) Check to see if there is anything blocking the sensor. If there is then remove the item and reactivate the sensor soap dispenser after 15s.
- 5) If the above steps do not solve the problem, replace the control box with a new one.

SFC-8790 QUESTIONS & ANSWERS

Q. How does the Sensorflo® work?

A. It uses laser technology. The Sensor emits a non-visible beam of light. When an object enters the detection area, the Sensor signals the Solenoid Valve to open for water to flow. When an object leaves the detection area, the Sensor signals the valve to close.

Q. Is the Sensorflo® sensor beam adjustable?

A. No, the Sensorflo® sensor beam is not adjustable. It has been factory set to factory specifications for these items.

Q. What about water conservation?

A. The Sensorflo® design directly addresses water conservation. Water savings of up to 65% are not unusual. Additional energy savings are realized by conserving hot water.

Q. Can the water temperature of the Sensorflo® Faucet be adjusted?

A. Yes, this Faucet can be retrofitted with an under the counter Thermostatic Mixing Valve. If you need to meet ASSE 1070, you must use our TMV (Thermostatic Mixing Valve) option.

Q. Does Sensorflo® reduce maintenance?

A. By elimination of on/off handles, control components are reduced and fittings stay cleaner longer. Only a light rinsing and wiping is required to restore the beauty of the Sensorflo® Faucets. Drip stains are eliminated. Fingerprints and soap spots on sinks and fittings are avoided. Finishes last longer and wash areas stay cleaner. Germs and bacteria are not transferred as easily making for a healthier environment.

Q. The chrome finish on my items seems to be deteriorating. What can I do to prevent this from happening?

A. Many commercial cleaning products contain harsh chemicals and abrasives. These products should not be used on any chrome-plated plumbing products. Please use only mild soap and water to clean the Faucet. Dry immediately with a soft cloth.

Q. Does the Sensorflo® system shut off immediately when an object leaves the sensing area?

A. A very short delay of approximately 0 to 1.5 seconds occurs before water is shut off.

Q. Are my Sensorflo® products protected from power surges?

A. Yes, Sensorflo® has been designed to have built-in power surge protection.

Q. If we lose power, are any actions needed to reset my Sensorflo® products?

A. After a power outage, the Sensorflo® system is automatically ready for operation as soon as the power comes back on.

Q. If I call a plumber to come and install this system, will they know enough to hook it up?

 $\pmb{\mathsf{A}}_{\pmb{\cdot}}$ Our installation diagrams are very easy to follow.

Q. What kind of soap can I use on the Sensor Soap Dispenser?

A. The Sensorflo® Soap Dispenser is designed to work with any hand soap that has a viscosity of < 1000cP.

Q. Do I have to use the foaming hand soap?

A. No. You can use either foaming hand soap or liquid hand soap. Just make sure you select the correct mode on the control box.
